Top titles pirated

PORTUGUESE company Microbait Software is copying Spectrum software in large quantities.

Based in Oporto, the company is offering around 54 cassettes for sale in Portugal.

Each contains two different top selling Spectrum titles from a wide variety of software houses. The cassette artwork is faithfully reproduced in full colour and the inlays contain extensive instructions

printed in Portuguese.

Not one of these games has been authorised by their original publishers.

At least eight of the 100 plus titles in Microbait's catalogue come from Quicksilver. Mana-

ging director, Rod Cousens, said: "Portugal seems to be one of the main offenders for this type of organised piracy. It's not the kids copying stuff that worry us so much, as this kind

continued on page 5

Virgin pushes for quality

VIRGIN Games' plans for the autumn reveal a change of strategy.

The company will launch just six new titles and this autumn

many of its existing games are to be deleted from Virgin's catalogue. Deleted titles include *Owzat* for the BBC, *Sheepwalk* and *Ghost Town* for the Spectrum, and all its *Dragon* titles.

"The best of our current software will be reduced to £2.99 until the end of November. These are games like *Falcon Patrol* and *Racing Manager*. The deleted titles are our not-so-good products," said managing director Nick Alexander.

"We're cutting the price because we've found that catalogues

Computers takeover

CAMPUS, manufacturer of the Lynx micros, which has been in receivership since June, is hoping to exchange contracts with a buyer.

Receivers Hacker Young says that final negotiations are now taking place.

Spicer, the paper manufacturer, is reported to be the buyer.

Melbourne House reveals Holmes' latest case

THE long awaited *Sherlock Holmes* adventure from Melbourne House is now completed and should be available from mid-September.

Like *The Hobbit*, *Sherlock*

Holmes was written by Philip Mitchell in 'English', with complex sentence constructions being understood and with characters leading 'inde-

The tough nuts to crack!

Braingames bring you the most entertaining and fulfilling adventure and strategy games.

For the Commodore 64
Cassette £7.95
Disk £9.95

Our adventures combine strong story lines, high quality graphics and sound to produce games you will want to play time after time.

Strategy games ranging from the White House to King Arthur's Court, from the oil business to a used car lot, will test your skills and imagination.

FAME QUEST

A friendly joust or duel to the death? Kill the dragon, run away or even try to talk to it?

These are some of the questions you will have to answer on your Fame Quest. You enter this world as a lowly knight without sword or armour. By means of your skill and judgement you will accumulate fame (and money!). Given time you may aspire to be the mightiest warrior in the land, but beware — many encounters await you on your Quest.

FAME QUEST

For the Commodore 64
Cassette £7.95
Disk £9.95

A game of strategy for one player, with full graphics and sound.

ELECTION TRAIL

ELECTION TRAIL

Run a media campaign in the Western States? Try to raise funds in Texas? Hold a rally in New York?

You are organising the presidential campaign for your candidate and decisions must be made which will make or break his bid for the White House. With everything at stake, you may find it hard to choose between a rally and a campaign tour; a press conference and a public debate.

An exciting and original strategy game for one or two players. Full colour graphics, maps and music make this a must for any aspiring politicians.

That a Portuguese company, Microbaite, should be selling unlicensed copies of UK Spectrum titles is not, at first sight, particularly noteworthy in these days of rampant piracy.

But two aspects of the company's activities will be giving cause for concern.

First, it is commercial piracy on a grand scale. Over a hundred top British Spectrum titles are involved including all the big names — *Chequered Flag*, *The Hobbit*, *Jet Pac*, *Manic Miner* and *Scrabble* are all on its list.

Second, this is no underground operation working out of some shady back-street accommodation address. Microbaite is apparently trading quite openly. The games are advertised, they are available in the high-street shops with four-colour window display stickers — the works.

Yet there is very little that the British software houses can do to stop it.

International copyright law is a funny thing. Even though Portugal is a signatory of the Berne Convention and the Universal Copyright Convention, halting Microbaite would be a lengthy and above all costly process. Bringing legal actions in foreign countries and then enforcing them is very difficult and time consuming.

So what can the UK houses do. Do they write off Portugal as a lost cause? Do they now add Portugal to an increasing list of such countries where there is no hope of controlling blatant software piracy?

Unfortunately, the answer is almost certainly yes on both counts.

British software is the best in the world, and it is being openly ripped-off.

What Microbaite is doing is a crime. An even bigger crime is that Microbaite seems likely to get away with it.

Piracy

◄ continued from page 1

of professional outfit."

Melbourne House, with *The Hobbit* and the *Horace* series, Psion and Beau Jolly — several ex-Imagine titles are on the list — have also been Microbait's major targets.

Peter Norman, Psion's product director, said, "We will pursue this extremely vigorously. We always go to great lengths to stamp out professional piracy."

Programs in Microbait's catalogue include: *Chuckie Egg* from AAF; *Football Manager* (Addictive Games); *Invasion Force*, *Voice Chess* (Artic); *Piranha* (Automata); *Zip Zap*, *Arcadia*, *Zoom* (Beau Jolly); *Manic Miner* (Bug Byte); *Dallas* (CCS); *Pool* (CDS); *Gulpsman* (Campbell Systems); *Black Crystal* (Carnell); *Halls of the Things* (Crystal); *Jungle Trouble*, *Harrier Attack* (Durell); *Dictator*, *Embassy Assault* (DITronics); *Violent Universe*, *The Pyramid*, *Black Hole* (Fantasy); *Heathrow Air Traffic Control*, *3D Space Wars* (Hewson); *Bugaboo* (Indescomp); *Mad Martha* (Mikro); *Hungry Horace*, *Horace Goes Skiing*, *Horace and the Spiders*, *Parodactyls*, *Penetrator*, *The Hobbit* (Melbourne House); *3D Tunnel* (New Generation); *Kong* (Ocean); *Invaders*, *Planetoids*, *Chequered Flag*, *Scrabble* (Psion); *Smugglers Cove*, *Aquaplane*, *The Chess Player*, *Xtadon*, *Trader*, *Galaxians*, *Games Designer* (Quicksilver); *Navigator*, *Everest Ascent* (Richard Shepherd); *Star Trek*, *Slippery Sid*, *Cyber Rats* (Silversoft); *Joust* (Softtek); *Cruisin*, *Blind Alley* (Sunshine); *Transum*, *Cookie*, *Jet Pac* (Ultimate).

Virgin

◄ continued from page 1

gue sales have now all but stopped — this is a way of repromoting the titles."

The six titles Virgin will release this autumn reflect the company's new policy of selective publishing.

"We are now going for quality rather than quantity," Nick continued. "But we are still going to market the titles extremely hard, and will spend £0.38m in advertising the games in the run-up to Christmas."

The new titles are *Falcon Patrol II*, *Terrorist* — written by Andromeda Software — and *Sorcery*, all for the Commodore 64, *Strangeloop* and *The Bix* for the Spectrum and *Sinbad* for the BBC B. *Sorcery* is adapted from the Spectrum version of the

Cheetah releases Rat

THE first cordless joystick has been launched by Cheetah Marketing. Available first for the Spectrum, versions for other machines are also planned.

The Remote Action Transmitter (RAT) works on much the same principle as a remote control TV unit. It has a touch

Rabbit creditors take action

RABBIT creditors are taking legal action to stop Stuart Edgar from continuing to act as liquidator of the company.

Stuart Edgar was appointed as liquidator by Rabbit shareholders after the company's creditors put forward no alternative at the creditors meeting on August 10th.

Now they have filed a petition to the courts objecting to Edgar's appointment.

However, because the courts are now in recess, the petition will not be heard until October.

Strangeloop for Spectrum

game, *Sinbad* has the Arabian Nights as its theme and *The Bix* is a simulation game based on the life of a rock star.

Virgin will continue this selective policy into 1985. "In the long term, Virgin will be releasing fewer games than in the past; at the most, it'll be two per month," confirmed Nick Alexander.

sensitive control pad and fire button. When pressed, these send out the relevant infra-red signals to a receiver which plugs directly into the edge connector at the back of the Spectrum.

The RAT can be used effectively up to thirty feet away from the screen, and the signals are sent out at a wide angle — about 30 degrees — so the player need not point the 'joystick' directly at the receiver.

The RAT is compatible with many top software titles including *Psytron*, *Trashman*, *Atic Atac*, *Sabre Wulf* and *Hunchback*.

The RAT should be available within the next week or so, and costs £29.95. The PP3 battery needed for the unit is not included in the pack.

Aquarius price falls

THE price of the Aquarius 1 micro has been cut by manufacturer Radofin Electronics to £49.95.

The drop means that the Aquarius 1 is now effectively

Radofin's sales director Mike Quelch

Sherlock

continued from page 1

pendent' lives.

As with *The Hobbit*, a knowledge of the literature is useful although not essential to the playing of the game.

The faithful Dr Watson is, of course, an integral part of the adventure and Inspector Lestrade of Scotland Yard also appears.

The player takes on the persona of Holmes and the game begins at his rooms at 221b, Baker Street. Successful completion of the adventure depends on solving a particularly difficult case that has Lestrade of the Yard completely baffled.

The adventure takes place in 'real time', and the locations are scattered over Victorian England. The number of locations and the complexity of the sentence interpretation routines have meant that the graphics in the game have had to be kept simple.

Sherlock Holmes for the Spectrum will cost £14.95. A Commodore 64 version is due for release in October.

competing with the ZX81 in the starter computer market. However, unlike the ZX81, the Aquarius offers 16 colours and 40 x 24 character graphics resolution. Software is available on both cassette and cartridge.

Radofin has also recently appointed Mike Quelch as sales director. Mike was formerly software sales manager at Dragon Data.

Domark's marathon quest

A PRIZE of £25,000 is being offered to the first person who can complete *Eureka*, an adventure-arcade program from a new company, Domark.

The game has been programmed by the Hungarian team from Andromeda, and consists of five separate adventures linked by five arcade games. The arcade screens must be successfully completed for the player to move from one adventure to the next.

Domark was formed last March by two ex-advertising account managers, Mark Strachan and Dominic Wheatley. The latter is the grandson of author Dennis Wheatley. The

pair originated the ideas for *Eureka*, and commissioned the Games Workshop founder and author of Puffin's *Fighting Fantasy* series, Ian Livingstone, to plan the structure of the adventure.

While Domark expects the prize to be claimed eventually, the company believes it will take six to nine months for anyone to finish it.

Eureka will be launched at the Personal Computer World Show. Available by mail-order only from November, it will cost £14.95.

Spectrum and Commodore versions only are planned at the moment.

Just too expensive

I am writing on the subject of your editorial in the August 16 issue.

If the home computer market is suffering from disenchantment it has nothing to do with any lack of intelligent software.

There is only one reason for the depression and that is the price of computer software. For a person such as myself, like a great many of my friends, good quality arcade or adventure games are just too expensive for our allowance of pocket money. This means that when one of us buys a game it is copied and passed around; a process which I am sure is taking place all over the country. The result is that the software houses lose out.

Can you really imagine the many thousands of "trigger-happy" arcade freaks buying documentaries or biographies for their micro? The idea is totally ludicrous.

Microdrive utility

I read with great interest the microdrive utilities published this week on your 'QL' page. I too have developed a similar program and would like to make a couple of observations which may save potential users many hours of fruitless bug-hunting:

1) It is impossible to call Merge (or DLine for that matter) from procedures on machines with the later issue Roms — mine is 'AH'. Attempting to do so results in the 'Not Implemented' message. The only ways around this are either to exit from the program via a Stop after the Proc/Pn cleared message has appeared or by the intelligent use of simple Basic.

2) The routines as listed start at line number 30000. This is inadvisable as it renders the Auto command useless, whilst developing start at line '1' cures this problem.

Finally, try including the following routine which comple-

tely wipes the screen — very useful when experimenting with different window sizes:

```
150 DEF PROCEDURE reset
160 OPEN #15,SCR.—
512,256,0,0:PAPER#15,1:INK
#15,1:CLS#15:CLOSE#15
170 END DEFine
```

To call this routine from SuperBasic simply enter Reset

A fab review

In the Ziggurat column in your issue dated June 21, Boris Allan considered the subject of magazine reviews of computer books, and with a style of review that he referred to as the 'Fab review'.

The article said that Boris took 'a random sample' of such reviews, and presents quota-

tions from this sample. I'm rather perplexed that all four quotations are from the same issue of *Personal Computer News*, and furthermore, that they're drawn from reviews of only two books written by my good self.

I'd be the last person to suggest that Boris was suggesting that my reviews are superficial and inadequate, and I just can't believe his article had anything to do with my not totally favourable review of his QL book in PCN issue 60. I wouldn't even like to think he has a warped sense of humour, but perhaps you could draw to his attention the fact that his random number generator appears to be broken. . . .

Extra income

I have an excellent idea to solve the problem of saving your favourite games on to ZX Microdrive.

The problem arises when software companies use machine code to load parts of programs to stop software pirates from making a profit. Tape copiers cannot change the machine code and therefore cannot copy the more complicated programs.

The solution is simple: customers with the tape version of the program simply send off the cassette inlay, as proof of purchase, along with their Microdrive cartridge to the software company which would, for a small fee, copy the pro-

gram on to microdrive and, to prevent further copies being made, mark the cassette inlay.

This would be a very good idea as the buyer profits, by having a fast loading game, and the software company also has a source of extra income.

Did he understand?

I would like to reply to I comments made by W. A. George in the August 16 issue.

He says he wishes I had been "more lucid". Does this mean he did not understand the article (QL Page, August 2)? Or is it that he was upset because the features and concepts would not cram into his ZX81?

I quite clearly stated that many Basic dialects could not support such concepts because they did not have local variables and procedures and functions which could be called recursively.

Alan Turnbull
Stockport
Cheshire

Increased piracy

In reply to Chris Sawford, I feel that I must make the following points. Firstly, making their routines available to the general public is exactly what most programmers want to avoid, as they may have put a lot of time and effort into them. Making them generally available might eventually put them out of a job, with others being able to write similar programs.

Secondly, making the program easy to copy also increases piracy and therefore reduces sales, another thing the programmer wants to avoid. Thinking that there is nothing wrong with copying software if you don't sell it is absurd, and people must realise that this is crippling the industry as much as organised piracy.

"Stand by to board! She's carrying British software!"

Have you got what it takes to
build your very own monster?

NEW
RELEASE
AVAILABLE
SOON

FRANK N. STEIN

BY COLIN STEWART

THE SETTING: Professor F.N. Stein's laboratory in his Castle in the Black Forest.

THE TIME: 1884

THE GAME: 50 Screens requiring timing, logic and planning to complete.

THE OPPOSITION: Too many to list here but featuring:- Snails, bats, ice (it makes you slip), firemen's poles, man eating pumpkins, spiders, slime (it slows you down), caterpillars, tanks, springs, light bulbs (they electrocute you), mice, lobsters, snakes, bumble bees, jack-in-the-box etc.

THE OBJECT: As you know, all the best monsters are hand built. Prof. Stein's life long ambition has always been to build his own monster - but first he needs all the bits!

You guide him around the dungeon picking up the bones - make sure you get the right order - then activate him by throwing the switch - the longer you take to complete each screen the higher will be the charge you give him - and the angrier he will become - so watch out!

Astrocrash

Destroy all the meteors with your laser but avoid the red ones in Kevin Ridley's game for 16K Spectrum

Astrocrash is an *Asteroids*-type game written in Basic for the 16K Spectrum. The subroutine starting at line 800 in the listing explains how the game is played. Basically, the player has to destroy 50 meteors with his spaceship's laser to win. If his ship crashes into a meteor five times or his power runs out, he loses. The meteors are not destroyed by crashing into the ship, so one meteor can have several crashes. Since some meteors (the red ones) home-in on the ship, it is therefore necessary to race away from them in gain room to manoeuvre. Manoeuvring consists of rotating either clockwise or anticlockwise or moving forward.

Notes

The game is controlled by means of the subroutine calls at the beginning of the program.

The rocket rotation is achieved by having four user-defined graphics characters (A-D), each showing the rocket pointing in a different direction. The variable (ch) representing the ASCII code of the character is increased or decreased by 1 depending on the key pressed and the new character is then printed.

The number of meteors on the screen (m) increases as the score increases but is never more than three. The line numbers, column numbers, and ink colours of the

meteors are held in three arrays - l(), c(), i(). To move the meteors, the line and column numbers are increased by values held in the array d() (d(1) to d(3) is for lines, d(4) to d(6) for columns). To enable the red meteors to home-in, the signs of the relevant values in d() are always kept such that these meteors move towards the rocket.

The laser effect is achieved by plotting a point (px,py) at the centre of the rocket and drawing a line from that point, using the draw coordinates dx,dy, which are calculated according to the rocket's orientation. This line is shortened if a meteor is hit or if the rocket is near the edge of the screen.

Mud in your eye

Christina Erskine talks to Richard Bartle, creator of MUD, at Essex University

Richard Bartle must be extremely thankful that his A Level grades weren't quite up to scratch. A grade higher, and he would have gone to his first choice of university, Exeter. If he had gone to Exeter, MUD might never have come into being.

As it happened, that one grade short took him to the University of Essex. The rest is probably D & D history...

About 2-3000 people have sampled Richard's creation, the Multi-user Dungeon in Essex's mainframe computer, in the four years that it has been running. Only 44 have managed to reach the ultimate status of

Wizard or Witch.

So far, only members of the university's Computing Society and a few external users with PSS (Packet Switching Service) systems have been able to access the DEC-10 computer where this vast Dungeon and Dragon adventure is stored. Now Century Communications plans to publish MUD commercially so that it is available to the public, sometime next year.

"The idea for MUD's creation began when I met Roy Trubshaw, a fellow student at Essex. He had had a long-term interest in adventures, and wanted to set up a multi-user game. I had been playing D & D games since I was at school, mostly by mail, so I was obviously enthusiastic about the idea.

"Roy wrote and designed the core of the game — it took up most of his third year and ruined his degree. After he'd graduated — just — I took over the game's development."

MUD started as a scenario of about 100 locations — a diversion for the Computing Society. The word spread, however, and demand from external users — mainly American students to start with — made Richard expand to 300. Today's version has about 400 locations.

The game's development took up all of Richard's spare time in his third year — evenings and weekends.

"Having completed my degree course, I wasn't too keen on the look of the outside world, so I took the opportunity of doing a PhD in Artificial Intelligence like a shot. Now I'll be able to stay with MUD indefinitely, because I've been offered a lectureship at Essex."

At one point there were too many external players for the Computing Society's time to cope with. "I went to the university authorities, expecting them to disapprove strongly of giving more time to a 'mere game'. But they were surprisingly understanding, and arranged that we could play at night, when no-one else would be disturbed.

"When MUD 'goes public', it won't be on the university computer — the night hours will be too inconvenient. Either there will be one big computer with the whole lot on it, or lots of smaller ones linked to a larger one. But it should be capable of accepting input from any modem, even the very slow baud ones. And obviously people will be charged, per hour, for playing the game."

The essential aim of MUD is to collect treasure and drop it in the swamp in order to collect points and enhance your status. The treasure may not always be obvious — you may well find some 'dirty old groats' lying around. Giving them to a beggar may earn you goodwill, but washing them and discovering that when clean they're actually quite

valuable is a lot more useful.

Not only are the traditional assortment of villains out to get you — dryads, dwarfs, zombies — but the interaction between players can be amicable or decidedly vicious. Nor are people as they seem — a senior lecturer in the computing department stole my axe three times while masquerading under the title of Bom the Berserker Enchanter!

You can talk to other players — either to help or mislead — and you can 'snoop' on them to find out where they are and what they're carrying.

Richard's title — as befits the game's Lord High Priest — is 44 Wizard. His role frequently involves acting as mediator when squabbles between players break out.

"I have to make sure that everything is sorted out amicably, as well. If I offend someone, they could wreak havoc in the game before leaving it. Also, I get a huge number of letters from people interested in learning how to play, wanting hints and so on."

Once you have become a wizard, or witch if you adopted a female persona at the start, you remain one, and can't be toppled from your position. But even without specific goals to aim for, the 44 wizards and witches still play. And you can always adopt a new identity and start the quest all over again — the interaction with different characters means that no game is ever going to be the same.

"People certainly get very wrapped up in it-myself, for one. I've known students stay behind in the holidays to have a go when they aren't going to be thwarted by other players. When we start the commercial version, it'll probably start with about 100 lines open — at the moment, the maximum number at any one time is 36, and only six of those can be external players."

Most novice players end up getting immediately lost in the graveyard, where the tombstones are inscribed with various names. Richard has commemorated all the wizards and witches on the stones — and some others as well. Roy Trubshaw has his own headstone, Brian Roberts, who wrote a chunk of the original game, is remembered, as is Nigel Roberts who extensively tested the game before it was launched to an unsuspecting computing society.

My personal favourite is the tomb dedicated to Murrell's Balloon Emporium.

"A friend of mine and Roy's tried to set up his own multi-user game, called FIG, because he said it was a FIG to write. But he never had time to finish it, and when he gave it up, his major location was Murrell's Balloon Emporium." Well, it beats radio dedications.

After an afternoon with MUD, I'll admit to being hooked. All I can say to anyone who doesn't have a modem/can't wait for Century to make it available, is, get those UCCA forms off to Essex.

Big brother

Hardware Plus 1 Expansion Unit
Micro Acorn Electron Price £59.90
Supplier Acorn Computers, 4a
Market Hill, Cambridge.

When I first bought my Electron I was obviously aware that it wasn't quite the same as its big brother the BBC, but took solace in the fact that it was a lot cheaper and that an interface providing a printer port would be coming soon.

My hopes were well founded — it didn't take long to come and at £56.90 it now gives me very nearly a 'big brother' for about £255 as opposed to £399.

To me the Plus 1 unit is very good value for money. It allows my Electron to at last

use a printer, joysticks and, eventually, Rom cartridges.

The analogue interface not only provides the facility for joysticks but virtually, in theory, allows the Electron to be used in control applications. Any electrical sensor apparatus could, in principle, be coupled up. The interface measures electric currents and converts them to a numeric form.

However, being an analogue port does mean that any game requiring a joystick will need analogue units to be connected. Most of the other interfaces on the market so far for the Electron have used switched joysticks. Whilst Acornsoft games needing joysticks will no doubt be compatible with the Plus 1, other software houses who already produce titles compatible with the switchable type may need some encouragement to make their programs compatible.

Having said that, I have found it very

strange moving from key controlled games to joystick control. Whilst my fingers have learned to locate accurately the required keys, my hand has yet to develop the reflexes necessary for the joystick.

For me the most important facility the Plus 1 offers is the Centronics-compatible parallel interface which allows me at long last to couple up a printer. It's only really when you haven't got a printer that you realise its true value.

Not only that but I found the Plus 1 manual far easier to follow than the manuals I have read which accompany printers — the Plus 1 manual lists all the previously unlisted 'FX' calls that are needed when using a printer.

Rather curiously, the Plus 1 also has two Rom cartridge ports. Where do I get a Rom cartridge to try? To date it would appear that there aren't any to be had. The BBC B also has a cartridge facility, though again there are no cartridges to use with it. All very strange.

This is a pity because Rom cartridges allow for virtually instant loading of games programs, etc, by merely plugging them in. No more time wasting with cassettes. It could also allow other computer languages to be used provided in the form of plug-in Roms. Not only is the Plus 1 very good value for money, but at last it provides the kind of facilities before only available to BBC owners.

The Plus 1 is a very neatly designed and powerful extension.

Fred Short

Extra Ram

Hardware E00 Disk Filing System
Micro BBC B Price £24.95 Supplier
MRM Software, 17 Cross Coates
Road, Grimsby, South Humberside,
DN34 4QH.

One of the problems with Acorn's own disc filing system (DFS) is that it uses up some of the RAM (2.75K) that is usually available for programs.

MRM Software have produced a DFS that does not use up any of the available RAM. Unlike Acorn's DFS, which comes on a single chip, the MRM DFS comprises three chips, and is mounted on a two inch square board.

When trying the MRM DFS with a large number of commercially produced programs, it performed well and no problems were found; however, in order to avoid using the RAM on the computer, some sacrifices have been made. The most notable is that only four files can be open at the same time, whereas the Acorn DFS allows up to five.

The MRM DFS is intended for anyone who already has a DFS in their computer, but finds that the amount of RAM left for their programs is insufficient for their

needs. The way in which the MRM DFS operates is the same as Acorn's and MRM assume that any manuals and formatting disks are provided by the supplier of the original DFS and therefore do not supply any themselves.

The MRM DFS cannot be considered to be fully Acorn compatible because of the

inability to open up to five files simultaneously. However, MRM do offer the facility to keep the original and their DFS in the machine at the same time and to switch between them when necessary.

Only worth thinking about if you need a little extra RAM.

Identikit

An educational game for 7-10 years

FREE

Make 15,000 different faces

IDENTIKIT Spectrum 48K, BBC B/Electron, Commodore 64.

Identikit is an ideal introduction to the computer for young children.

All you have to do is use just two keys to select all the features you want to build up a face. When you have made the face, you can also animate it - wriggle the nose, blink the eyes, smile, frown etc.

MATHS INVADERS Spectrum 16/48K, BBC B/Electron, Commodore 64, Atari. Provides excellent motivation to learn simple arithmetic. Subjects covered are addition, subtraction, multiplication and division. The invaders are coming down the screen towards you. Load your gun with the right answer to their question and fire it at them before they land on you. Superb graphics and sound plus a range of difficulty levels to suit any age, make this a favourite with every child.

A Captains Badge is yours
Free with each Identikit
Program.

An Admirals Badge is yours
Free with each Maths
Invaders Program.

Start as a Captain with
Identikit - then earn your
Admirals Badge by
answering the maths
questions and shooting
the Invaders.

MEMOTECH MTX500

£35.00
FREE
SOFTWARE

The Ultimate. Only £199.

MEMOTECH MTX500 MAJOR FEATURES

STANDARD I/O PORTS

- Variable rate cassette port (up to 2400 baud)
- Two joystick ports using Atari configuration
- Centronics-type parallel printer
- ROM cartridge
- Uncommitted parallel input/output port
- Internal ROM board port
- Hi-Fi output port
- 4-channel sound through TV speaker
- PAL composite video colour Monitor port

THE RS232 COMMUNICATIONS BOARD

(required for disc expansions)

- Two independent RS232 ports
- 60-way Disc Drive Bus supporting up to four 5.25 and/or 8 inch floppy disc drives, plus instant access Memotech Silicon Discs and Hard Discs with capacities up to 32 Megabytes

USER RAM

- Optionally expandable to 512K in increments of 64, 128 or 256K

24K OF ROM which includes:

- MTX BASIC
- Noddy, a simple text-handling language
- A powerful Assembler/Disassembler - sections of machine code can be created and run by calling the Assembler from within BASIC
- The sophisticated Panel, which displays the contents of registers (including the flag register) and pointers during program execution
- Two languages for user interaction with each other and with the user

ROM EXPANSIONS

- MTX NewWord, a 32K word processing package
- HiSoft PASCAL, written specially for the MTX Series

THE KEYBOARD

- Full size, 79-key, full stroke professional quality keyboard incorporating:
- Main Block with typewriter style layout
- A separate 12-key numeric/editor keypad
- Eight programmable function keys (16 with shift)

HI-RES GRAPHICS MODE

- 256 x 128 pixel resolution plus
- 32 x 24 text in 16 foreground and background colours
- All 16 colours (i.e. 15 colours plus transparent) are available on the screen together
- 32 user-definable easily controllable sprites
- 128 separate GENPAT statements providing a huge range of user-defined characters

TEXT MODE

- Text resolution is 40 x 24 characters
- 128 user-defined characters
- Eight user-definable virtual screens or windows (available in all modes)

Zaps & pows

Program *Spectrum Sound Effects* **Micro** *Spectrum Price* £7.95 **Supplier** MFM Data Services, 141a Camden Road, Tunbridge Road, Tunbridge Wells, Kent TN1 2RA.

Let's face it — the Spectrum isn't ever going to have amazing sound no matter what.

What has been achieved with the programs that have appeared so far is nevertheless pretty surprising though — zaps and pows never thought possible.

There are a few programs on sale to let you play around with the sound on the Spectrum — basically using machine code you can make a number

of very short boring sounds appear to be one interesting sound.

Perhaps the best of these programs is *Spectrum Sound Effects* from MEM Data Services. This program lets you design and store sounds and then play them using the keyboard. It will even show you a (sort of) waveform for the sound. You can incorporate sounds into your own programs and keep a library of 90 sounds in the computer at any time.

Despite the limitations, it's certainly good fun for people who like to play around with sounds although Commodore 64 owners should try to restrain their mirth.

Ian Waltham

Sand-bags

Program *Answer Back Junior Quiz* **Price** £10.95 **Micro** BBC B **Supplier** Kosmos Software, 1 Pilgrim's Close, Harlington, Dunstable, Beds.

Save the maiden on the battlements from a nasty dragon! Answer the ques-

tion correctly and your hot-air balloon is free to chase the beast and bomb it with sand-bags. That's the reward for success in Keith Spence's quiz program. It's important because otherwise you might just buy a quiz book. Apart from this bit of arcade action, you finish up with a score sheet that includes the number of maidens eaten!

After loading a master han-

Dizzy!

Program *Alien Break In* **Micro** *Electron Price* £6.95 **Supplier** Romik Software, 272 Argyll Avenue, Slough, Bucks.

My first impression when I saw the screen display of *Alien Break In* was how extraordinarily fast it was. For the Electron, or even the BBC, this display of aliens whizzing around the screen is enough to send you dizzy. What a pity, therefore, that the game doesn't allow continuous firing, but only one bullet at a time until that bullet reaches its target.

The mother ship lays pods that hatch on landing or split into two if shot. Other ships peel off from the main fleet and fire towards holes made in the defences. The successful ones mutate into mother ships which are indestructible.

Alien Break In is a cross between *Space Invaders*, *Killer Moths* and a few other games, all of a similar nature with a

similar objective in mind. Having accepted this lack of originality, there was much I was impressed with, not so much the game itself but in the way Romik Software have given a lot of consideration to the needs of the player.

At the beginning, you are allowed to choose your own keys with which to play; so often games producers choose difficult key combinations. You can, also at the very beginning, choose your level of play. If like me, you're not so hot at some games, it gets rather discouraging to be stuck at one level.

Also a rare facility is the incorporation of an automatic demonstration of the game should you not press the space bar to begin. How often are the instructions as clear as mud and, until you've been 'killed' several times, impossible to grasp the objective.

So whilst the game is like so many others it merits praise for its user considered facilities. Well done, Romik Software.

Fred Short

ding program, you select one of 18 general knowledge quizzes such as 'Nature', 'TV Films and Theatre', 'Games and

Sport'. Then choose the number of questions and whether to be timed. There are three formats: multiple choice (choose A,B,C or D); yes/no or complete the answer (where 1?2? are missed out and you have to type them in.) You can choose which format or have a random selection. I could not fault Susan Van Baars's question research.

The quizzes can be modified or you can invent your own. The master program makes this extremely easy and demands no programming knowledge. This facility alone will recommend it to many teachers.

Finally, a word of special praise for Roz Woodcock's very attractive cover painting (14" x 8" when opened out). This brings micro program packaging into the same class as top-rate album sleeves, though it would not reproduce well in our columns.

Dave Waltham

Jungle life

Program Pitfall Micro Commodore 64 Price £9.99 Supplier Activision UK, CGI House, Goldings Hill, Loughton, Essex

Pitfall from Activision is another jungle game for the Commodore 64.

In fact, it bears an amazing similarity to another game recently reviewed — *Cuthbert in the jungle* — the setting, the hazards and the goals are all the same.

Not surprising then that — since this is the original — Activision have recently taken legal action to stop Microdeal continuing to sell *Cuthbert*.

In this official version of the game you have to guide someone called Harry through the jungle in search of various valuables like money bags, silver and gold bars and diamond rings. However, there

are plenty of obstacles in his way — if the cobras or quicksands don't get you, the crocodiles or rolling logs probably will. You have to avoid these hazards by either jumping over them or swinging over them on a vine. An alternative route is via the underground tunnels, but these contain deadly scorpions and the path is sometimes blocked by brick walls.

Although the range of hazards is quite small, variety is produced by changing their distribution on the different screens as Harry runs through

the jungle. The graphics are nicely done, and the overall presentation is better than the otherwise almost identical *Cuthbert in the jungle*. Like *Cuthbert* the game is good fun for a while, but it soon becomes rather repetitive.

Richard Corfield

Detonated

Program Blocker Price £7.95 Micro BBC B Supplier Thor, Erskine Industrial Estate, Liverpool.

This fast action game by Martin J. Sykes involves running and collect a set of detonators. You can only tread on blocks, but they disintegrate after you pass so choose a path with care. There is screen wraparound so you can go in a single step from one edge of the screen to the opposite one. Obstacles in the form of TNT sticks appear on some blocks — hit them and you die. You must complete the task in 10 seconds or be fried by a million volts!

Just to make the task harder, you are pursued by giant boots; if they tramp on you it's all over!

Between frames of the main game there is a diversion for bonus points. A simpler version of the field of blocks is presented with just one detonator at the bottom of the screen. You start by bouncing left to right at the top of the screen and choose your moment to dive for the detonator — trying to avoid any TNT.

The action, if not totally original, is fast, furious and just simple enough for you to feel frustrated when you cannot quite make it, so you try again... and again... Very good fun.

Dave Atterson

Forgettable

Program Oracle's Cave Micro Commodore 64 Price £7.99 Supplier Dorcas Software, 3 The Oasis, Glenfield, Leicester

Oracle's Cave from Dorcas Software follows the current trend of combining an adventure game with some graphics to add to the interest.

In the game, you find yourself in a mysterious cave complex, into which you have inadvertently wandered. To escape, you must collect up 40 units of treasure, including that guarded by the cave dweller of your choice, and then defeat the mighty Oracle, all within five days.

The screen is divided into various sections. The top half shows you a picture of the part of the cave where you are currently standing. Another

part displays your present status — energy, strength and what you are carrying. A third area gradually builds up a map of the caves, which saves you the bother of drawing your own.

It is a fairly standard, uncomplicated adventure with not many locations or objects to bother about. Although quite nicely presented the game does have one or two irritations. For example, all the commands and objects are represented by one-letter codes which are rather forgettable. Also, if you accidentally clear the screen, the display is ruined and it never sorts itself out.

It is difficult to see who this game will appeal to. Dedicated adventure gamers will probably find it too simple and there is no action appeal to arcade fans.

Richard Corfield

Gin sling

Program Shaken Not Stirred Micro QL Price £9.95 Supplier Soft in the Head, Front basement, 67 Earl's Court Square, London SW5 8DQ

The first non-serious QL program (well, serious to some maybe) is *Shaken Not Stirred* by the wonderfully named Soft in the Head Software.

What this ingenious and vital program does is provide you with the recipe for most cocktails known to mankind.

The system to find the cocktail could hardly be simpler, you simply type in a series of letters and the computer

finds any cocktail or ingredient containing those letters; for example, typing mar will find you Margarita whilst gren will find you both the cocktail grenadier as well as grenadine the ingredient.

The only problem appears to be that there is no facility to add your own cocktails to the database and I suspect that many of the cocktails are also known by a vast number of other names so a synonym collection would have been useful.

It should also be noted that the program costs £9.95, a price doubtless not unrelated to the fact that blank microdrives cost £4.

Ian Waltham

Invisible wall

Program *Spy School* **Micro** Commodore 64 **Price** £3.95 **Supplier** Dimension 21, 8 The Broadway, Southall, Middx.

It's a pleasant change to come across a new arcade game which seems to have an original theme. In *Spy School* from Dimension 21, as the name implies, you have to perform various tricky tasks which even James Bond might find intimidating.

You have to shoot down a whole squadron of enemy helicopters. You have to collect a briefcase (no doubt full of secret documents) and make your escape while dodging detector beams which trigger off a deadly rain of shells. Or

you have to find your way to safety through a maze of trees, mines and invisible walls.

After you complete each task the rescue helicopter arrives to fly you back to home base. If you achieve the objectives on level one, the whole process is repeated, but is made a bit more tricky.

The game is quite interesting for a while, especially as the theme is rather unusual, but, unfortunately, it does become rather repetitive.

What is more, the graphics and sound are rather lacklustre and really not up to the high standard which most games for the 64 now achieve.

A pity, because the idea itself has plenty of potential.

Richard Corfield

Melt-down

Program *Atom Smasher* **Micro** Electron **Price** £6.95 **Supplier** Romik Software, 272 Argyle Avenue, Slough, Berks.

The object of *Atom Smasher* is to prevent melt down of a nuclear reactor. All I can say is, if what the game requires is all that is needed to prevent the real thing happening, then living as I do within two miles of a nuclear power station which was approximately nine years behind schedule and is constantly taken "off line" because of "slight hick-ups", it does not justify the constant worry I have of the real thing happening.

The game begins with a blue electron moving rather erratically around the neutron. To delay melt down you must shoot the proton, which moves

around the purple nucleus, with your remote controlled super laser.

Each time you shoot the proton, an extra electron appears. If you collide with an electron, you lose one of your three lives. If you shoot an electron, everything speeds up for a short time until the electrons cool down a little. If you delay shooting, melt down starts.

The molten debris approaches the nucleus from each side. You can blast the debris away, but the only way that you can stop it from advancing is keep shooting the proton.

That's the theory of the game. *Atom Smasher* is yet another example of the actual game not living up to the excitement which the written blurb attempts so colourfully to infuse into a prospective purchaser.

Fred Short

Star map

Program *Starseeker* **Price** £7.95 **Micro** BBC B **Supplier** Mirrorsoft, Holborn Circus, London EC1P 1DO.

Starseekers could only exist in a Planetarium or on a computer. The main program shows you the stars — from anywhere on Earth and at any time between 1st January 1900 and 31st December 2100. You can look in any direction and zoom in on items of interest.

The constellations can be outlined and named, and by placing a cursor over any star, you can learn its vital statistics. It's even possible to dump key images onto an Epson printer

and carry a star-map with you at night.

There is a mass of information in this program and booklet; it's here astronomy comes to life. You can even watch stars move as the night progresses.

The second part is *Solar System* which provides similar detailed views of our home area, paying special attention to the Moon and Halley's comet. The comet comes close to earth once every 76 years and early 1986 will be the best time to see it.

The program is sensitive about any extra paged ROMs on board your Beeb. A quick poke of 7&2AD=0 before loading solves that.

Dave Watterson

Deadly spikes

Program *Ghouls* **Micro** Electron **Price** £6.95 **Supplier** Micro Power, Sheepscar House, Sheepscar Street South, Leeds LS7 1AD

I was beginning to wonder if games inventors had run out of ideas, since quite a lot of so called 'new' games have obviously been rehashes of older tried and tested models. *Ghouls* nearly comes into this category with its similar nature to *Pacman* type games.

Your task is to rescue the power jewels from the creepy mansion on the top of the hill. Sounds easy until you are confronted with deadly spikes, not to mention the nasty spider that jumps up and down ready

to catch you. Eating the yellow tibbits earns you extra points and a stray power jewel causes the ghosts to disappear.

The game gives you the choice of key control or joysticks, but not those used with Acorn's Plus 1. This highlights the problem Acorn have given their Plus 1 buyers, since date Electron interfaces have opted for the more familiar switch type joystick and games producers like Micro Power have incorporated switched joystick option.

I like the novelty of the game, the option of stopping the action mid-game, sound or no sound and more important, the option of returning to the instructions.

Fred Short

SPECTRUM & BBC

POOLS PREDICTOR

WITH
**11,000
MATCH
DATABASE**

Now in its 3rd successful season, Mayday Software's Pools Predictor has been made even more powerful with a new and unique 11,000 match database. SEVEN separate forecasting techniques have been combined to give you the best forecasts yet. Still as easy to use as ever, you can now tune the program yourself to improve forecasts as the season progresses.

PROGRAMMERS

We are looking for freelance machine-code programmers to join our team. We are a growing company and have already secured significant levels of national and international distribution for our games, recreational and utility software. We have been asked by our distributors to extend our range of titles. We are prepared to lend equipment to programmers of high calibre.

We are particularly interested in hearing from programmers who either have programs ready for, or who will be able to produce programs for MSX, Amstrad, Commodore, Spectrum and Atari.

We package our products extremely well and have facilities to produce extensive documentation should this be necessary.

The managing director will be pleased to give further information. Please telephone, or write to us in Basingstoke.

DREAM

ATTENTION! ATTENTION! ALL VIC & CBM USERS!

Do you use tapes? Are you sick and tired of waiting for your programs to be Loaded/Saved from on the tape? Then you need a **TORNADO!!** Tornado allows you to Save/Load/Verify your Basic/machine code programs faster than a CBM 1541 disk drive does!! Due to popular demand! Tornado now comes with new and more powerful commands plus extra instructions to assist you in making fast versions of your existing machine code/Basic programs. Tornado is available on tape for CBM 84 and 8K + Vic 20.

Do your Run/Stop and Restore keys often fail? Do you want to come out of those crashes?! Or come out of those unbreakable loops?! Then what are you waiting for, get yourself a **BREAKER!!** Reset switch and let your computer know who is the boss!! Breaker can be connected to your machine in seconds. Connecting directly to the serial port of the CBM/Vic20/1540-1 MPS 801 etc. included with the Breaker reset switch is a basic recovery program. Breaker is now available for any CBM 64 or Vic 20.

Available for CBM 64 and the Vic 20 now in the **NEW EDITION!** Now combining Vic 20 & CBM 64 **ROM-FILE.** Containing a complete disassembly of CBM 64 & Vic 20 Basic & Kernal Rom with comments! As well as a complete description of all 6502/6510 instructions and addressing modes + a complete listing of a machine code monitor.

Please make cheques/PO payable to:

BSF COMPUTER SERVICES LTD.

Recalled from memory

Graeme Brown helps you trace characters in memory with his machine code program

This short machine code routine allows you to input the coordinates of a character position and it will return with the address in the display file that corresponds to the top pixel row of that position. This may be useful within a larger machine code program when the construction of a graphic is required. Once the top pixel address is known, the remaining 7 lines can be found simply by adding 256 to each address until the complete character position is filled. It is, in some ways, easier to do this routine in Basic but the machine code version shown here is intended as a subroutine to a larger program that can be called when required.

The program itself is quite simple and makes use of the following formula:

Top Address (X Y) = 16384 + INT(X/8)*2048 + (X - INT(X/8)*8)*32 + Y

where X = Row coordinate

Y = Column coordinate using the

Print At format.

The program is shown in listing 1 in a demonstration form and lines 10 to 50 Poke the code directly into memory. It uses the printer buffer so disconnect your printer if you have one. I use the printer buffer for testing any short routines since Ramtop does not need to be moved and at 256 bytes long it is big enough for most routines.

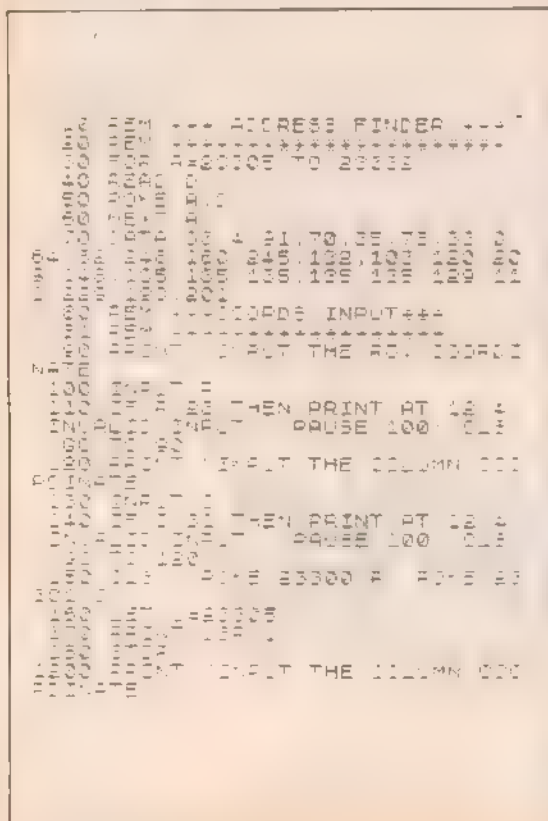

The program asks you first for the row coordinate then the column coordinate of the required position. It will return from the routine and print the address. If the routine is included as a subroutine within a larger program, then the swapping of the HL and the BC registers is not strictly required. This was done as part of the demonstration to enable the calculated value to be "handed back" to the Basic operating system.

LD HL : Load address containing ROW
ROWSTORE coordinate
LD B, (HL) : Put it into B
INC HL : Point to address of COLUMN coordinate

LD C, (HL) : Put it into C
LD HL, 16384 : Start of display file
LD A, 248 : Load mask and use to find
AND B : which screen portion the
 : required address is in
PUSH AF : Save this value on stack
ADD A, H : Add it to the HIGH byte of
LD A, B : H
POP DE : Get ROW coordinate
 : Load DE with screen portion
 : indicator
SUB A, D : Reduce ROW no. to a line within
 : a particular screen portion
 :
ADD A, A :
ADD A, A :
ADD A, A :
ADD A, A :
ADD A, C :
LD L, A :
 :
PUSH HL :
POP BC :
RET : Return

Note

The swapping of the HL and BC registers is only required if the program is being run in response to a User command. This is to ensure that the address required can be printed using the Basic command Print Var storage address. If the routine is used as a sub-routine within a larger M/C program then the address can be left in the HL register as it is normally used for this purpose.

Tracing a line

Andrew Pennell makes use of the QL's multi-tasking to give the machine a Trace facility

This program uses the most powerful feature of the QL — multi-tasking — to add a Trace ability to SuperBasic.

To my knowledge, not only is this the first QL machine-code program to be published, but it must be the first to use multi-tasking. What it does is to set up a small program that constantly monitors Basic, and prints the current line number at the top of the screen. It can do this as it seemingly runs at the same time as the Basic interpreter.

To use it, firstly type in the listing, and save it before running. Next, Run it, and you should be greeted with "loaded OK". If you get "wrong data", then you must have made a mistake in the data somewhere. To turn the Trace on, you have to Call 261120 (it's important that you only do this call once). You should get "-0" printed at the very top left of the screen. Next you should Call 261192, which sets the speed of the trace to an average value. From now on, any

program that Runs should be accompanied by a display along the top of the screen of the line number each time it changes, separated by dashes.

On my television, there is quite a gap between the top of the screen, and the top of the listing window. If you don't have such a gap on yours, you can change Line 160 to position your Trace window at a more convenient place, but try not to make it clash with any other windows. If you changed it to `as="seri"` then the trace will appear on a printer, but firstly set the printer's width using control codes, or else it will all be printed on one line of paper!

A machine-code program that runs under multi-tasking is known as a 'job', and normally on the QL only one job is running — the Basic interpreter. However, what the machine-code does is to set up a second job, the sole purpose of which is to print line numbers every time they change. Each job

has a speed factor, from 1 to 32, and this determines how fast it runs compared to the other jobs. Basic runs at the maximum of 32, but Trace works OK at a speed of 8, and this is what the CALL 261192 is for — you can change the speed of the Trace. Normally 8 is OK, but sometimes 16 gives better results, and if you want to be extravagant you could get it to run at 32. Note that the faster you make the Trace, the slower Basic runs at, so that a Trace speed of 32 will make Basic half its normal speed. A speed of 0 will switch Trace off, and make Basic run normally.

With Trace enabled, the *Respr* function cannot be used, and will give a 'not complete' error. Also, during some I/O operations, you can get strange numbers printed, and a *Mode* instruction makes the print-out disappear, for (as yet) unknown reasons. After you've run the loader program, you can safely do a *New* — Trace will remain intact, and possibly running.

An assembly language listing of this program, along with masses of other information, will shortly be available in my forthcoming book *Assembly Language Programming on the Sinclair QL*, published by Sunshine Books.

Error trap

Wayne Smithson helps cut down Dragon loading problems with this machine code utility

Although the Dragon has superior saving and loading procedures to many of its rivals, that doesn't stop the dreaded I/O Error occurring...

Here is a program to combat the I/O Error and so relieve the tension of Dragon owners everywhere.

This program sits at the top of Ram and, whenever a *Cload* or *Cloadm* command is typed in, the program notes which you chose and, if an I/O Error occurs, the program effectively types it in again for you. When you type *Cloadm* in, the program doesn't remember the name, however, this is in case you get an I/O Error in the middle

of a program or you type in the wrong name. In other words, the computer will search for a file of the name typed unless an I/O Error is encountered, in which case the next valid file will be loaded in.

After some thought, I decided not to check for an *F/M Error*. This is because you may want to find a file on a cassette without loading it in. To do this just type *Cloadm* for a Basic program and *Cload* for a machine code program. The computer will click through the tape until it finds the file, the name will be printed on the screen and an *F/M Error* will occur. You will then be just past the beginning of that program, and

no corruption will have taken place.

The program itself occupies 66 bytes at the top of Ram, it isn't repositionable unless you have an assembler. The Basic loader will insert the machine code and check it for mistakes. The assembler listing is included with brief notes for those interested. Some locations of interest are:-

401-403 Whenever an error occurs, Basic jumps here and does nothing in particular, so you can intercept any error. (Each has a number held in the B ACC. If B=0 then no error).

377-378 Whenever a Basic command is typed in, a jump is made here which does nothing so intercept this and you can tell which command has been typed in. (Token will be in A ACC).

44HAG Basic pointer, tokenise a Basic line, store it address pointed to by this location-1, load A ACC with the first token and the computer will think it is running a Basic line (dope!). Each 'line' must end with a 0. The Basic tokens can be found in PCW (Vol 2 No 42) October 1983 and please note that:

Cload token=153
Cloadm token=163.77 (A ACC.=77)

COURSEWINNER

The Punters Computer Program

COURSEWINNER allows you to use the power of your computer to get the edge on the bookmaker.

● COURSEWINNER contains a database full of detailed information on All English and Scottish flat courses. The ten leading jockeys and trainers, and effects of the draw is detailed for each course.

The information can be displayed on the screen at any time.

● The program analyses these factors combined with the results of the last three outings, starting price and weight carried.

● COURSEWINNER is simple and quick to use, yet very powerful.
● Based with detailed instruction booklet

Price £12.50 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for

SPECTRUM 48K, BBC/B, COMMODORE 64, DRAGON, APPLE II/IIe, ATARI 400K.

POOLSWINNER

The Ultimate Pools Prediction Program

● POOLSWINNER is the most sophisticated pools prediction aid ever produced. It comes complete with its own massive database.

● Can be used for Scoredraws, Draws, Aways and Homes.

● The database contains over 20000 matches (10 years league football). It updates automatically as results come in.

● The precise prediction formula can be set by the user. This allows development of your own unique method.

● Package is complete with program, database and detailed instruction booklet.

Price £15.00 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for SPECTRUM 48K, ZX81 16K, BBC/B, COMMODORE 64, DRAGON, APPLE II/IIe, ATARI 400K.

Available from dealers or direct (return of post) from:

POPULAR Computing WEEKLY

★ CLASSIFIEDS ★

★ Popular Computing Weekly was voted magazine of the year by the C.T.A.

★ It is Britain's only weekly home computer magazine with a published Audit Bureau of Circulation sales figure.

★ It has a classified section that is now required reading for everyone with an interest in small micros, or who wants to buy or sell: SOFTWARE
★ UTILITIES ★ ACCESSORIES ★ SERVICES ★
★ HARDWARE ★ HIRING ★ CLUBS ★
★ RECRUITMENT ★

★ £6 per SCC semi-display,
25p per word lineage.

★ 6 day copy date.

CALL DIANE DAVIS ON 01-437 4343 FOR
AN IMMEDIATE QUOTE.

Popular Computing Weekly, Sunshine,
12/13 Little Newport Street, London WC2R 3LD

COMMODORE 64

dealers. Dealers' contact: The Edge on 01 240 1422, or EMI Distribution

TURBO CHARGE YOUR SPECTRUM

Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- * A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- * Compatible with Kempston and Protek protocols.
- * Works with latest Quickshot Mk II auto rapid-fire joysticks!
- * Choice of Rom cartridge or tape cassette software.
- * Instant program loading with cartridge software.
- * Built-in power safety device – unique to Ram Turbo.
- * Full one year guarantee.
- * Immediate availability – 24 Hr despatch on receipt of P.O./credit card details (cheques – seven days).
- * Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

Ram Electronics (Fleet) Ltd, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

Please send me:

____ Spectrum Turbo Interface(s) at £22.95
+ £1 p+p (overseas orders £3 p+p)

____ Quickshot II Joystick(s) at £9.95
(Only when purchased with Turbo – normally £12.95 + £1 p+p)

I enclose cheque/postal order or charge my Access/Visa for: £ _____

In the heat of the night

Alex Treacher's program enables you to predict and calculate the rate of meteor showers

I find that observing meteor showers, or shooting stars, can be the most satisfying form of astronomy. All you need is a deck-chair and warm clothing. (It gets quite chilly at 3am, even in the summer). To make accurate observations you will need a tape recorder or pen and paper to note what you see. Then, just sit back and watch!

The activity of a particular meteor shower — ie, meteors per hour — starts off at zero, increases, peaks, and then diminishes again. The date and time of these occurrences can be found in various publications, such as *The Astronomical Almanac*, and the *Handbook of the British Astronomical Association*, as they vary from year to year. The activity is measured by the Zenithal Hourly Rate (ZHR). If the radiant (ie, the point in the sky the meteors seem to be coming from) was directly overhead — at the zenith — and the weather conditions were perfect, the number of meteors observed every hour should come very close to the ZHR. Are all these conditions ever met? Not a chance.

Hence this program: working on average figures for the showers' rates, which strictly speaking ought to be updated every year, this program calculates the Expected Hourly Rate for the showers included in the program. I have excluded data on several minor showers, as they are often difficult to observe. To include these, their rates for

each day should be put into the data for array RT% (lines 1440-1620), add the appropriate data between lines 1330 and 1420, and alter the day-number testing (lines 260-350) to recognise the appropriate dates, and to collect the data.

Some of the showers extend beyond the dates in the program, but as the ZHR for these days is less than five, the shower would hardly be noticeable. I have made the Ursids the exception to this rule because they are very poorly observed. They occur so close to Christmas that, even if the sky is clear, everyone is so full of bonhomie that meteors are the last thing on their minds!

I'm still working on the Proc to figure out if it's going to be cloudy! In the meantime, good observing.

Important Variables

Y Year
M Month
D Date
T Time
Daynum Number of day (1-366) that has been selected.
RT%() Rate for every day in year.
Streams Name of selected stream.
Fsts First day of activity (day/month)
Lsts Last day of activity (day/month)
Maxr Date of maximum activity
Maxhr ZHR for above date
Rate ZHR for the selected day.

Ehr Activity expected for date and time selected

Ra Right Ascension of radiant (decimal)
Dec Declination of radiant (decimal)

Line Descriptions

190-210 User input: numerical input for all responses. Time should be in decimal form.
2630-350 Identifies which stream visible (if any) and selects correct data.
400 Puts an ending on the date of maximum.
430-510 Displays data.
1020-1040 If the rate for the selected date is zero, the program assumes that no shower is present.
1330-1420 Data for individual streams.
1440-160 Rate for each day of year.

Procedures

Procdatload Reads lines 1440-1620 into array RT%.
Procdaynum Calculates how many days into year the selected date is. (Accounts for leap years.)
Procalc_{az} Calculates elevation and bearing of the radiant. Line 860: Replace 0.0276 with -0.066 for every degree you are west of Greenwich.
Lines 900 and 930: Replace 51.82 by your own latitude (decimal).
Procehr Correction of Hourly Rate for altitude of radiant.

And to follow . . .

Adrian Warman continues with the second part of his menu program

This week we finish off the assembly listing of the program and also present a Basic loader for those without assemblers.

How the Program works (cont from last week.)

70-73. Finds the value for ystart. This value is also placed in row, which is used to keep track of which screen row the selection cursor is currently on.

74-80. Finds the value for xend. Ensures that it is greater than ystart.

81-83. Finds the current position of the text screen, and adds this to the posn pointer to the menu position.

86-88. Posn is the master value of the screen position. Knowing the current row that the selection cursor is on, it is necessary to convert this to a memory location, stored in from.

90-99. Row has the screen row that the selection cursor is on. Using this, it calculates how many screen rows to move down to show the current position of the selection cursor.

100. Highlights this menu item.

101-103. Waits for any key-press. When found, it puts the key into key.

104. Removes the highlight from the menu item.

106-108. Was the key F1. If not goes on to check for a different key.

109-112. Moves up by the number of rows in skip.

113-114. If the cursor would be off the top of the screen, goes and tests to see if wrap is available.

115-116. Is the cursor past the top of the menu? If so, branches to the end of main loop.

117-124. The cursor is now too high. If wrap is allowed, sets cursor position to the bottom menu item — otherwise puts cursor on the top menu item.

126-127. Was the key F7. If not it ignores.

128-131. Moves down to next menu item.

132-134. If the cursor is still in the menu item rows, carries on to the end of the main program loop.

135-141. The cursor is past the end of the menu. Depending on the value of wrap, moves the cursor to the top or bottom of the menu column.

143-146. Makes a final check. Was the key Return? If not, goes and repeats the program loop until selection is made. Otherwise, finish program.

148-150. Should the selected item remain highlighted? If so, sets highlight again.

152-159. Row contains the screen row of the selection cursor. Uses this to calculate which menu item this was. The answer is put into the Y register.

160-161. Loads A with zero, in order to return the correct value. Finally it returns to Basic with the menu item number.

166-167. Produces the error message.

171-177. Finds the next parameter in the command line. Routine getbyt evaluates and returns a value in the X register. This is compared with the maximum value allowed. If it is OK, it returns; otherwise it produces an error.

181-187. Highlights menu item. From has the start address of the menu item on the screen. Width has the maximum number of characters to highlight.

In practice, the routine is very easy to use; but in order to make it as flexible as possible, the calling parameters must be correspondingly powerful. As with most things, the best way to learn how to use the routine is first to run the example program, and then modify it for yourself.

1000 REM BASIC LOADER FOR MENU SELECTION PROGRAM.

You've got your QL hardware. You've got your Psion software.

Now get your Sunshine book.

Just released from Sunshine is the latest book from the highly acclaimed QL Classics series - and it's called *Quill, Easel, Archive & Abacus on the Sinclair QL*. All these packages, which are included with every QL sold, are recognised as powerful in their own right, but when working together with one another, they become highly effective problem-solving tools for business. Alison McCallum-Varey's book introduces you to all the four packages, but, most importantly, shows you exactly how to run them as a complete system. This book, essential for every QL Owner, will expand the day-to-day use of your QL, letting you run Quill and Archive in tandem for instance, and then outputting the results for graphic interpretation by the Easel package. If you've Quill, Easel, Archive and Abacus on your Sinclair QL, then you need *Quill, Easel, Archive and Abacus on the Sinclair QL*.

Fill in your details below to receive your copy of the book.

HORIZONS

BRITAIN'S PREMIER COMMODORE MAGAZINE NOW HAS AN A.B.C. CERTIFICATION

51,972 JAN-JUNE 1984 (ABC)

It's an independent, audited figure that you'll find unchallenged amongst our competition. We've achieved it through quality. Each month, Commodore Horizons presents to its readers, a balanced range of programs, reviews, articles, profiles, letters and news.

Combine this with a monthly prize competition and an innovative discount club for readers, and you'll see why we've become Britain's No. 1 support magazine for one of the most popular range of computers.

There need be no more guesswork, confusion or doubt — with a page cost per thousand of £6.63 there's simply no better way to reach Commodore enthusiasts, and that's ABC guaranteed.

Contact Jeremy Kite on 01-437-4343 right away for further media information.

Spectrum 48K Historical Wargaming

AUSTERLITZ £9.50

This game is a re-creation of Napoleon's famous victory at Austerlitz. You are Napoleon.

The computer provides a highly sophisticated opponent with 90% of the program written in machine code. All the mechanics of wargaming, such as movement, combat, terrain effects, reports etc., are taken care of by the computer. The game is for one player only with 3 levels of difficulty and is played on a physical map of the battlefield.

**PACIFIC WAR £6.00
MIDWAY £5.25**

Replay the aircraft carrier battles of World War 2. The player controls the American forces, your computer the Japanese. Full screen display of task forces and air action movement. Includes air searches, air strikes, fighter defence of ones own carriers and allows the player to control the detailed scowls of each aircraft carrier from within his own status display.

COULD YOU TEACH BASIC?

If you can write your own programs in BASIC and can talk to people then YOU CAN TEACH with the PROLOS System (c). The PROLOS System contains all the information you need: Organisers Manual, Tutors manual, full lecture notes, handouts, visual aid guide, how to advertise ... and a FREE back-up service by phone.

The PROLOS System costs are covered by just 3 students at home ... but is designed for up to 40.

For more details and an application form write NOW to

Dept. PCW, The Computer Group,
Oaklea, Goldhanger Road,
Malden, Essex CM9 7QU
or ring 0621-58091 NOW.

PROLOS

POPULAR Computing WEEKLY Back Issues

All issues of the POPULAR Computing Weekly are available as back issues for only 50p each. (Very cheap indeed!) An index of the contents of the 36 issues published in 1983 is now available for sale. Price 1.00. (1.25 if you wish details of the price list for back issues, notices and news that you might have missed.)

Please send me the following back issues at 50p each:

Total £ _____

Please send me a copy of the 1983 PCW Index at £1.20 ☐

I enclose a cheque/postal order for £ _____

Open Forum

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

Revcounter

on Spectrum

This program simulates a car — the idea of the game is to accelerate to 90 M.P.H. in the least possible revs. To help you, two gears are built into the car. If you reach 90 your

driving skill will be rated.

Program notes

- 1-41 Program start
- 22-40 Variables start
- 500-1100 Screen set up
- 1113-3000 Game working out
- 2869-4090 End reports
- 8008-8060 New game option
- 8069-9100 Introduction and instruction

To save the program Save "REV-COUNTER" line 1.

Clickety-click

This column tries to keep up with the latest in computer and communications technology. This none-too-easy task will become much more difficult when new legislation and the privatisation of British Telecom come into being very soon.

Some of you are already interested in packet radio and data packet switching techniques. Commercial systems like BT and Mercury who use these systems already on a vast scale have taken the technology a

long way towards the situation where it is now possible to transmit, accurately, vast amounts of data almost anywhere in the world. Packet switching techniques make these systems fully interactive so that just as you can play a computer game in real time with an opponent across the globe linked by a satellite, so can hundreds of people be involved in an interactive situation or game within the UK.

If this were just the Prestel system, that would be one thing but it has already gone much further, particularly in the United States. There, it is possible to do all your shopping, message sending, financial dealing, responding to your favourite soap opera and even your daily work without even getting out of bed.

I suppose that there are some who may think that this sounds like heaven, but there's

no accounting for taste.

Back in 1982, the British government agreed in principle to a new, perhaps inevitable idea, called Value Added Networks or VANs for short. What this means is that following privatisation, data networks like Mercury and British Telecom will have competition from third party carriers who will be licensed to carry traffic as long as there is added value, or something special about the traffic. BT and Mercury will still be the prime normal carriers but the systems with a VANs licence will be operating the 'special' systems. Some are already in existence carrying data for the Midland Bank and various Building Societies among others.

Proposed VANs systems involve the interactive use of data systems for the public, some in conjunction with cable television, which will provide instant

opinion polls in which millions of people can take part from their own homes. Imagine the interminable panel games on the cable networks with a million or so contestants.

One idea for a VAN that has already been floated is the uniquely British game of Bingo. Packet switching operates so quickly that Bingo is believed to be feasible on a grand scale. Recent Bingo games in national newspapers have shown that there need be no limit to the number of players. It is hard to say where it might end... was that clickety-click or unlucky for some...?

Arcade Avenue

Bird bait

Superior Software of Leeds have lived up to their name and released a couple of high quality, if unoriginal, arcade copies for the BBC. *Star Striker* is a version of the post-Galaxion space shoot-em-up usually called *Moon Cresta*. The colourful aliens burble menacingly, swirl, split into two when shot and even fly up beneath you just when you thought it was safe to stop dodging. Asteroids and fireballs add to the difficulty but as a consolation careful docking of the three-part space ship can eventually provide you with a mega-craft capable of firing several shots at once and wiping out aliens at a cracking rate.

Mr Wiz is an almost perfect copy of *Mr Do* — the oddity named but popular arcade

game where the central character, who looks a little like Andy Pandy in the original, digs a tunnel to eat cherries. Chasing monsters can be squashed by dropping apples onto them or by throwing crystal balls. Bright colours, attractive animation and continuous music (fortunately a feature that is becoming more common on machines like the BBC and CBM 64 that have excellent sound facilities) make this game a winner.

Mr Do has since reappeared in the arcades in two further arcade games. In one, the name of which escapes me, he has to climb all over a carnival roller coaster avoiding the cars. The second, called *Mr Do's Castle*, is probably my favourite arcade game at the moment with cartoon-quality graphics, marvellous monsters and tremendous bouncy music. If Superior ever produce a good enough version of that I may have to find £400 for my own BBC.

For the 64 there are a couple of interesting new games. Commodore themselves have released the official version of Bailey's *Lazerian* — not a very successful game in this coun-

try, in fact I have only ever seen it once. This is nevertheless a very good copy. It is a three-screen game where first you must fly around a planet shooting at squirly things in the middle. When you hit them they fly out into space and chase you around. On the second screen you have to fly through some caverns avoiding swarms of nasty flying things and on the third you have a chance to blast away at a completely over the top Phoenix-like mothership.

Microdeal are now, sensibly, avoiding over-reliance on one micro by releasing games for the Commodore. *Arena 3000* is an interesting development despite being another version of the much-copied game *Robotron*. The company have cleverly allowed the option of using both joysticks — one to control the movement of your android and the other to control the direction of fire, just as in the original game. True *Robotron* fans will know that this is essential for achieving high scores as well as recreating the real feel of the game. However, in case you have never tried using a free-standing joystick with one

hand, well let me tell you — you haven't missed much. You must fix them down to get the full benefit. (Incidentally *Robotron* is one of the few original arcade games that have the TV screen the 'right' way up, which helps with the conversion to home computers.)

Finally, whilst on the subject of Microdeal, you may remember a few weeks ago I mentioned their new *Dragon* game written by Tom Mix called *Buzzard Bait*. Well, having finally seen it load, I can reveal that it is a good version of the game. Just where you flap around ledges on giant buzzards trying to kill the enemy with your lance by being higher than they are at the time of collision. Needless to say, the enemy have lances as well, and there's an awful lot of them at any one time.

Tony Kettle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame) then write to: Tony Kettle, Arcade Avenue, Popular Computing Weekly, 12.13 Little Newport Street, London WC2R 3LD.

Head Office: 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

3D LUNATTACK

Do battle with the Seiddab in a futuristic age. Pilot your ZS Hoverfighter over the craters and around the mountains of the luna landscape. Equipped with the latest infrared lasers, duodec missiles, radar, navigation and shields penetrate the Seiddab defences and head towards their command base. Destroy the Seiddab Dah Tanks, Aerial Mines, missile silos and Hoverfighters, you must not fail in your mission to drive the Seiddab from their luna base. A stunning 3D Graphic Presentation by Steve Turner for the Spectrum 48K and Commodore 64.

A GLIMPSE OF THE FUTURE

THE INTELLIGENT PRINTER INTERFACE FROM CAMBRIDGE COMPUTING

FEATURES: ★ FOR 16K OR 48K SPECTRUM.

- ★ COMPATIBLE WITH ALL CENTRONIC PRINTERS.
- ★ COMPATIBLE WITH ALL CENTRONICS PLOTTERS.
- ★ RECOGNIZES L LIST AND L PRINT.
- ★ WILL RECOGNIZE COPY TO PRODUCE SCREEN DUMPS ON ANY GRAPHICS PRINTER — IN UP TO SIX SIZES AND THREE STYLES INCLUDING GRAY SCALE SHADING AND COLOUR. (SUBJECT TO PRINTER CAPABILITIES)
- ★ DOWN LOADABLE USER DEFINABLE CHARACTER SET TO ALLOW THE WIDEST POSSIBLE RANGE OF PRINT STYLES.
- ★ SPECIAL SOFTWARE ALLOWS THE INTERFACE TO RECOGNISE THE FUNCTIONS OF THE PRINTER IN USE AND ALLOWS THE STYLE OF PRINTING AND COPYING TO BE EASILY ALTERED — BECAUSE THE SOFTWARE IS IN ROM IT DOES NOT NEED TO BE LOADED FROM TAPE EVERY TIME THE INTERFACE IS USED.
- ★ CHANGING FROM ONE PRINTER TO ANOTHER IS READILY ACCOMPLISHED BY A QUICK AND EASY-TO-USE MENU PROGRAMME.

Tony Bridge's Adventure Corner

Follow the hare

Dear Tony,
Please help! I know it's a little early for you to have tried Hareraiser Prelude, but having recently received my copy for my Commodore 64 (after a month of impatient waiting!), I find all my feelings of eager anticipation suddenly turned to shock and desolation.

On loading you are given a rhyme about the origins of the Hare and told that keys Z,X and the cursor keys are used for movement. These keys do not follow the N,E,S and W that I had assumed they would; it is therefore difficult to record where you've been. Each location is graphically similar, the scene consisting of grass, sky, clouds, sun and trees. The text consists of such gems as: Use your brain; Can you see the wood for the trees; Early bird catches the worm — to give you a few examples. In a few locations a Hare runs from right or left in the centre of the screen and then disappears. No inputs seem to be required.

"So, Tony, please, what on earth am I meant to be doing. Do I have to follow the Hare? Do I make words from the clues? Help! Mrs Gillian Slade, 73 Amethyst Rd, Christchurch, Dorset BH23 3ED.

Hareraiser is the adventure from Haresoft which offers the prize of the golden jewelled Hare of Masquerade, or £30,000. While I haven't yet seen it, let alone tried it, we have had a couple of letters from people less than satisfied with the game.

Masquerade is the book of puzzles that had thousands of hopeful people digging up half of the British Isles in the quest for the Golden Hare, and this game, for several "popular micros", promises the same sort of thing for the more home-bound of us. Gillian is stuck in the first part, the Prelude, and the finale is on sale soon.

"Dear Tony, here is a list of adventures I have completed. If anyone out there needs a clue to any of them, they can write to me, including a SAE, and I'll be happy to help: Colossal Adventure (Level 9): 10/10 — what can I say! Magic Mountain (Phipps): 7/10 — good for beginners, Greedy Gulch (Phipps): 6/10 — beginners only, Pharaoh's Tomb (Phipps again): 9/10 — reasonable, Knight's

Quest (Phipps): 10/10 — not for beginners! Colditz (Phipps): 7/10 — not as difficult as it looks, Velnor's Lair (Quicksilver): 5/10 — I finished this in three days, Quest Hewson: 10/10 — no comment! The Hobbit Melbourne House: 8/10 — Lower marks because I felt the run home with the treasure was a little flat. Espionage Island (Arctic): 8/10 — reasonable.

"Now, can anyone help me with two problems — In Arctic's Golden Apple, how do I get the emeralds from the glass case in the red room, and in Incentive's Mountains of Ket, how do I get past the skull and the dragon?" Karen Tyers 19 Pains Way, West Ewell, Surrey KT19 0HA.

I can help you with these two, Karen: to get the emerald from the glass case in Golden Apple, just try Singing! As for the skull in Ket, you must wear a certain combination of articles to get past — and to avoid the dragon, try Pouring the oil in the warm room.

Douglas Smith writes to me from Glasgow, asking me to suggest adventures for the beginner on the Commodore 64, while Robert Hardie writes from Sydney in Australia, asking for a list of good novices' programs for the BBC. Several American users have also sent pleas for Basic adventures to run on their Timex 2000s.

The first adventure I would recommend to anyone remotely interested in the art, is a version of the original Colossal Adventure. Melbourne House's versions for the BBC, Commodore and Spectrum is as good as any — although Level 9's similarly-named Colossal adventure is available for these and many other micros, and has the advantage of 70 extra locations at the end.

To get an easier introduction to the techniques of adventuring, and have a lot of fun on the way, try Melbourne Houses' masterpiece, The Hobbit. This features many innovative ideas, not the least of which is "animation" — this refers to the habit of the other characters in the adventure to go wandering about getting on with their own lives, while you are struggling with the various problems (just don't come back to me in a couple of months, asking for help in the Goblin's Dungeon).

Graphic adventures are well-liked by many adventurers, but, unfortunately, there are not many for the BBC. Some of the best, though again, not necessarily the easiest, are from Epic Software. You'll find this company at 11 Edendale Road, Melton Mowbray, Leicestershire LE13 0EW. Castle Frankenstein is actually text-only, boasting 220 locations and 29,000 characters of text — but The Wheel of Fortune, Epic's newest Epic, is text and graphics.

The grand Elf can't leave the good old Beeb without mention of the granddaddy of all BBC adventure-writers, Acornsoft. Games like Philosopher's Quest, Countdown to Doom, Castle of Riddles and Splurp Adventure have endeared themselves to

countless (almost!) Beeb'ers — and the newest adventure, Kingdom of Hail, seems set to become yet another classic.

While on the subject of BBC adventures, it may be worth looking at a couple of new releases from Micrograf (of 120 Oxford Road, Reading, Berks.), who, with Vampire Castle and Flint's Gold, have a pair of good introductory adventures.

As for the Commodore — there are many adventures available for the machine from the States, including the Infocom series, which are rather state-of-the-art, and thus may prove rather frustrating for the beginner. Companies like Datasoft, Spinnaker and Adventure International all release a lot of software for the Commodore, including adventures of all sorts. The latter software house is the brainchild of Scott Adams, whose name is synonymous with adventure programs — try Pirate Adventure, Adventureland, and The Count as good introductions, leaving some of the others for later.

Finally Basic adventures for the Spectrum — I'm afraid that there are not many! The market, as it stands at the moment, demands fast responses to a variety of input, and that can only be achieved by machine-coded programs. The only two that spring to mind readily are Treasure of Meathos, that I mentioned in Vol 3 No 33, and Velnor's Lair, from Quicksilver. This one is written by Derek Brewster, a well-known personality in the software world. This was his first (I believe) commercial enterprise, largely ignored until he became more famous for programs like Lunar Crabs and Codename MAT.

I'll leave you now with a couple of not-often-mentioned adventures. Brett Marl, from Chester, writes: "Please help me with Ghost Town, from Virgin. In three months, I have still not found the combination to the Safe".

And, from Richard Alexander of London, some hints for Denis Through the Looking Glass, from Applications Software. "To get out of No. 10 (a problem that vexes many people; T8) try this [refer to the list of clues below] 7,7,3,2,14,7,16,12,18,16,9 — and after every 10th move, you should 9. Other hints include 5,19 three times before going 11 out of the 10 — don't 4 the 13 in the 20, and finally, 6 needs his 1,21,2,11

1 Eyebrows 2 Scuth 3 Hida 4 Kim 5 Knot 6 Healey 7 North 8 9 Drunk 10 Window 11 Lawnmower 12 Pot 13 Frog 14 East 15 Flask 16 Look 17 Needs 18 Get 19 Sheet 20 Garden 21 Trunmed

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

ZX-81 OWNERS

AT LAST
THE PROGRAM YOU'VE
BEEN WAITING FOR!

Rocket Man

with
Hi-Res Graphics
on standard ZX-81 16K

Actual ZX-81 Screen Display!

- | | | |
|--------------|----------------|-------------------|
| 1. Diamonds | 5. Fuel Cans | 9. Player |
| 2. Sea | 6. Rocket | 10. Bubloid |
| 3. Platforms | 7. Vulture | 11. Fuel Gauge |
| 4. Ladders | 8. Leg of Lamb | 12. Men Remaining |

The aim is to collect all the diamonds from the far left hand side of the screen, whilst avoiding the rampant Bubloid. These emerge from the sea and are hell-bent on returning to their watery habitat with you in tow. Sooner or later you are going to end up in the drink - The idea is to make it later!

By belting round the system of platforms and ladders, cleverly avoiding the Bubloid, you collect the fuel cans which appear in random positions, until you consider that your fuel gauge indicates sufficient in the tank. Now you can go and collect your rocket. With the rocket-pack strapped to your back you can fly across the expanse of sea to collect the diamonds... but don't run out of fuel or your rocket-pack will simply disappear and you will wind up in the drink!

There are six stages with six different platform layouts. On stages 1-3 the Bubloid, which floats in front of the platforms with uncanny ease, gets an ever increasing ability to home in on your position, making the task of staying alive more demanding with each stage. On stages 4-6 you once again start with the easiest Bubloid (which is a blessed relief!) but the fuel cans are replaced by legs of lamb which you must collect to feed your vulture, and once it has enough energy (or you think it has!) you must flap across the water on its back to collect the diamonds.

Extra men are awarded for every 10,000 points - but ONLY once you have collected all the diamonds and so completed each particular stage.

GOOD LUCK!

Acoustic coupler

A Bennett of Whitehaven, Cumbria writes:

Q I am seriously thinking of buying a modem, but the snag is our telephone is not very new. The plug is permanently fixed to the wall, and an acoustic coupler would be no good either as the computer is rather a long distance from the phone. Could you please advise me on what to do?

A If you do not have one of the new BT jack plug sockets (which cost about £25), then you will have to use an acoustic coupler. Distance from the telephone is a problem, but only if you were upstairs and the phone was not. Acoustic modems are not as reliable as other types of modem, but they are still very usable. My advice to you is to consult your local BT Sales Engineer for advice on how to proceed. The service will cost you nothing and you are certain of an expert on-the-spot opinion.

Disabled keys

C Wright of Lewton, Suffolk writes:

Q I own a Vic 20 and would like to know how to disable the Run/Stop key. I have heard that Foking 37150.2 and using an Input statement will disable the Run/Stop and Restore keys, but that the only way to disable Run/Stop is to program in machine code. Also, what do the symbols < and > stand for? My speech synthesiser pronounces

them as "Power", but I can't understand what they are there for. Just seems a waste of good keyboard space to me.

A In order to disable the Run/Stop key you should Foke 788,194. The Foke you mention only disables the Restore key. To disable both the Run/Stop and Restore keys you should Foke 808,100. The two characters you mention are normally used for cursor control, try experimenting with them when you have a program listed on the screen and you might find out how useful they can be.

Basic learning

P G Rix of Abergavenny, Gwent writes:

Q I have recently purchased a BBC B, for both personal and business use. However, the nearest I have ever been to a computer before this is the other side of a shop window.

Can you suggest any courses that people such as myself (I am a hotelier) could attend, where we could spend a week or so learning the basics (pardon the pun).

A As you are a hotelier can I suggest Butlin's. I know that may seem a little strange, but the course at their Skegness camp was highly recommended by Mr Harding in Vol 3 No 24.

The courses run for a week and details are obtainable from Butlin's at Skegness.

Computer education

Mohamed Inaam Al Sherar of Kuwait, writes:

Q These days it is commonly heard that computers are in use in schools for educational purposes, especially the BBC computer.

I wish to know how computers and computer-aided learning and teaching can help the students in their normal studies, and what kind of software is used for this purpose?

A The biggest impact that computers have made in the educational field has occurred in the primary schools. There are many reasons that the secondary schools have not made as much of computers in the classrooms, the main one being that they are constrained by the formal requirements of exam syllabuses.

Some teachers see computers as a way of interesting young children in the 'boring chores' of spelling, simple mathematics, and elementary geography. The computer is seen as a way of coping with the wide range of abilities found in a single class. Most of the software for these (and other) purposes has been produced, either by teachers, or by those closely associated with the teaching profession. Virtually all of the primary school software uses coloured graphics as a means of getting the message across and also as an 'interest grabber'.

Compiler answer

A Fearon of Birmingham writes:

Q I own a CBM 64. I am writing an adventure game, but I would like my program to be in machine code rather than slow Commodore Basic. I have heard that a compiler might be the answer, can you confirm this? Also, can you tell me how big a Basic program it can compile, as my program will use nearly all the available memory (34-38K). How could I gain access to the hidden memory which is denied the Basic program programmer? Another question, how can I implement my own graphics in machine code in my adventure?

A A compiler would be the answer, except that as they normally have to reside in

memory when the program runs you might well run short of memory. Also, you would be unable to sell your finished program, because of copyright problems. A compiler will take up between 5-10K of memory and will almost certainly place restrictions on you as to what Basic commands you can use, as well as restricting the facilities of the machine.

Whilst I sympathise with your wish for your program to be superfast, it is true to say that adventure games do not need to be very quick. You do need to respond to an input as fast as possible, I agree, but any random events, or movements can take place while you are waiting for the next input. Your only other real alternative is to write in machine code, or to use a compiler and look for ways of saving space. One such way would be to use character compression to reduce the amount of memory needed to hold the textual descriptions of locations, etc.

Joystick interface

Paul Stead of Hull writes:

Q I recently purchased a Dk'Tronics keyboard for my Spectrum and I have found that I cannot find an interface to fit onto the back of it. I wrote to Dk'Tronics and told them of my problem, but I am afraid I did not get a reply. I would be very grateful if you could help me.

A I am sorry you never received a reply from the manufacturer. The only difficulty in connecting joystick interfaces to this keyboard that I have come across concerns the Sinclair joystick interface. You should be able to connect any other interface that uses the edge connector without any trouble. The ZX printer works quite happily with this keyboard.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem **Peek it** to Phil Rogers and every week he will **Poke** back as many answers as he can. The address is **Peek & Poke**, PCW, 12-13 Little Newport Street, London WC2R 3LD

MEGA-BIX

In *Paranoid Pete*, Pete is paranoid because of his concern for wheat and the way it is so easily decimated by Mega-Wibbles. This is agrarian commitment of the highest level.

Pete looks vaguely like one of those Weetabix characters and his job is to dig in the seed which is falling from the harvester spaceship and protect both it and himself by bashing the roving Mega-Wibbles. There's lots of colour and graphics in the game, but it isn't fundamentally very sophisticated. This is perhaps why Ubik have stressed its appeal to younger players. Simplicity can be a virtue.

If you're five, you may well love the game; if you're 15 you won't be impressed. Technically it's nothing special.

FOR SCHOOLS

I think, he says sticking his neck out, waiting for it to be chopped off, that *Pilot — Plus/64* is the first appearance of this language on the Commodore 64. In fact, I can't recall having seen another version on any home micro other than the BBC.

Pilot is supposed to be as good a language as Basic for learning with and is particu-

larly suitable for things like tests and other things with a list-like structure.

The booklet you get with the program gives you enough information about the language to enable you to actually do some programming of your own, as opposed to referring you to reference works on the subject.

Although it could be useful for writing things like adventure games, I suspect that mostly this is a package for use in schools rather than for the average punter, hence, partly, the price £26.

GO WEST

An adventure for adventurers and ZX buffs of long standing is *The Quest for the Holy Joystick*. It's text only and Quilled, but with a nice line in in-jokes and references to the flotsam and jetsam of computer life.

One of the first locations you'll come to is the ZX Computer Fair at Alexandra Palace at which you will find such obscure reference points as 'The Sunshine stand' and 'Tony Bridge' (who he?). Here, too, you will discover one of my favourite bits, 'West there is a very famous adventure' it says. You go west and well... buy it for yourself.

Virtually every adventure

Pick of the week

WIDE VOCABULARY

Around a year ago Psion released, under licence, a version of *Scrabble* for the Spectrum that had a vast vocabulary and had us all amazed and impressed. It's still a 'vital' enough program to be included on the special microdrive deal Sinclair have planned for Christmas.

Now the people who issued the licence, Leisure Genius, have issued the Commodore 64 version of the game. It forms part of a planned range of games based on originals designed by Spears and Waddingtons.

The Commodore version of *Scrabble* adopts the same standards as the Spectrum one. The *Scrabble* board on screen is comparatively small — just big enough for you to read the letters. Up to four can play, one of whom can be the computer. The computer is equipped with 11,000 words which is enough to ensure a reasonable game.

How long the computer spends hunting through its database of words is determined by a skill level set at the beginning of the game. The highest level can take a very long time indeed. As in the Spectrum game, you can see the computer trying out words and checking scores on the screen while you're waiting for it to come to a conclusion.

People always complain if one reviews things by comparing them with something on another machine, so let's just say that *Scrabble* on the Commodore 64 plays a mean game and that any microcomputer can play *Scrabble* is a remarkable thing in itself. As such it's highly recommended to any Commodore owner. But I can't help thinking it a bit odd that it knows no more words and responds more slowly than the Spectrum (48K instead of 64) version.

you can think of, including *Denis* and *The Hobbit*, appears at some point in the game and personally I heaved a sigh of relief for a game, particularly an adventure, that does not take itself too seriously. Not only that, but it seems to function perfectly well as an adventure, too. After an hour I was still none the wiser about the plot but quite entertained. Excellent for those who don't like to take adventuring too seriously.

SIX-PACK

Hardly a new release — but a new concept perhaps. Beau Jolly has bought up the rights to most of the Imagine catalogue and are issuing the games, along with a couple of Liverwire in packs of four and six.

There's little point in reviewing the games (apart from one unseen one called *B.C. Bill* which is also available separately and can be reviewed as such) but given that the Commodore 64 pack, for example, consists of *Arcadia* (very good) *Pedro* (not so good) *Cosmic Cruiser* (very good) *B.C. Bill* (reviewed sepa-

rately), *Invaders* (very good) and *3D Jumpin Jack* (best Frogger) — it's obvious you're not getting dross.

Therefore the main consideration is the price — it's £14.99 for the six packs and £9.99 for four. That's around £2.50 a game — most of them previously £8.99 or so. So the packs are an excellent idea for those who've just bought their computer and want a range of games to start off with or aunts who want something to buy as a Christmas present, but are not sure what to choose.

BODILY PARTS

Frank N Stein is fun. In fact, although there's really nothing technically astounding about it and neither could it really be said to be original in any way, somehow it does something right and I found myself having many more just-one-more-goes than I have had for ages. Since *Jet Set Willy* in fact.

It's a collect and dodge game — you collect the bits of Frank N Stein's body, dodge various completely irrelevant and odd objects and wander back and forth. There are various platforms on various levels and you must use a series of springs to bounce from one to another. Frank N Stein's monster's parts have to be collected in the right order and eventually returned to the lab at the top of the screen.

Each screen is different and requires a new strategy: things bounce, wobble and bash you in unexpected ways and figuring out how to collect all the different bodily parts without getting bashed becomes a matter of some judgement and skill. In the top five within two weeks of release, I'd say.

UNPARTISAN

Ocean have produced the first reasonable *Track and Field* clone I've seen. It can come as no surprise to discover that it's for the Commodore 64.

Entitled *Daley Thompson's Decathlon* it is apparently endorsed by your favourite world's greatest athlete and mine, as well as being well... good I suppose. It couldn't be said to require the same skills as the real thing, though.

The game also has an extensive soundtrack, which is partly Yellow Magic Orchestra (hope you're paying royalties, lads) and partly a specially composed Olympic anthem-type thing which is actually pretty good.

Like *Track and Field* you race, throw and jump by a mixture of frantic joystick toggling and the fire button — the former to get up speed, the latter to determine the angle of jump (or throw). You can compete against the computer and another player — if you beat the current record the crowd erupts with entirely unpartisan cheers. (Here the program diverges from real life.)

It's not *Track and Field*, of course — the graphics aren't quite up to it. But it's close and there is a little man who comes out to measure your jump with a tape when appropriate.

XMAS

Every now and then we get something new for the Texas TI99/4A: the temptation to ignore it is strong, though, since unless they come from Texas themselves they are certain to be in Basic and not good compared with the offerings of other micros. This, I hasten to add, is totally Texas's fault for not making the technical details of the machine more accessible.

Sloop's Christmas is based on a well-known cartoon character to which Sceptre Software almost certainly don't have the rights. The game has three screens, to get from one to the other you need a password. The first screen has you helping Sloop's friend to drop in (literally) on his Christmas celebrations, then he has to shoot a turkey and finally drive home safely.

One nice idea is *Musiload*; as the program loads on one tape channel, the other is used to play music — probably like waiting for a plane to take off.

BIG DADDY

Quiz programs seem to be what's happening, man, in the wonderful world of computer software — dozens have been

released over the past few months giving hours of fun to all the family (apparently — my family hates them).

What looks like being the big daddy of them all is *Junior Quiz* on the BBC and the Electron. This tape has a machine-code program that formats and organises the questions and 18 files of questions on various subjects from nature spelling.

Aside from the vast number of question available, what also makes this one of the best of its kind is a sensible menu system that lets you choose the style of question you want — multiple choice, yes or no — and add your own questions to the files.

The program's nicely packaged with a clear explanation of what does what and the range of questions should mean it takes quite a while to exhaust.

HIGHLIGHTS

Although nothing seems to be able to move *Football Manager* from its position as 'the best football manager game' people still venture into the genre — probably because a lot of programmers also like football.

The Double is for the Commodore 64 and has the immediate virtue of being £2.99. It's far more a management game than *Football Manager* — it doesn't for example, have match highlights graphically displayed. On the other hand there are a large number of options available to you, from changing the formation of the team to spying on your rivals.

It isn't all buying and selling players either; as manager you have to consider things like gas bills, wages and other mundane details. Can you fight your way to the first division without going broke? For a mere £2.99 you can find out.

CARTOONS

SIMPLE

Curiously enough, *The Really Easy Guide to Home Computing, Commodore Edition*, is really easy, as well as being a useful guide.

It's a big book designed for kids which uses a variety of little cartoons to take you slowly through the rudiments of basic programming, pointing out possible sources of error and showing you exactly how to get each of the graphics characters used for the control codes.

The only problem with the book is that, because of its thoroughness, it doesn't actually take you very far — the latter pages go only so far as to deal with printing things on the screen in the right position and using control characters.

Still, it ought to be very useful to the absolute beginner who is in no hurry to understand everything at once.

Following close on the heels of Forth as language of the month is Logo, versions of which are cropping up all over the place — a Spectrum edition was recently released to much acclaim.

Although Logo is supposed to be fairly simple language designed for children to learn quickly there are few simple books about it. One problem is the non-standardisation of versions of the language — among micros only the Sinclair one is supposed to meet the official requirements.

Logo Programming, a book from Century, gets round the compatibility problem by presenting problems for both Apple and Research Machines Logo types with notes covering other differences.

Obviously much of this book concerns itself with turtle techniques and drawing pictures but there is more to Logo than this. Other sections of the book describe the use of Logo to manipulate text and figures, using lists and procedures.

The right question

It is traditional to think of technological development as something which responds to a need.

Society needs a means of communicating quickly over great distance and the postal system is born. The horses used by the post office get tired, the carriages are slow and so new carriages are developed which are light and fast, yet reliable, but still not fast enough. The postal industry is quick to adopt the new technologies of transportation; cars, motorcycles, aircraft, and so on, but society demands more.

Alexander Bell, Guglielmo Marconi, and a great number of other inspired workers were busy creating answers to this particular problem. Now we are all communicating like mad with our telephones, radios, televisions, and modems.

Have the temerity to mention that you would like to watch the Olympic games live from half-way around the world and someone is only too pleased to stuff up a couple of satellites in geo-stationary orbit to help you out.

This is the traditional view of technological development and, very often, is completely wrong.

It is nonsense to suggest that Orville and Wilbur Wright had any great desire to solve the problem of meeting the world demand for cheap package holidays abroad. They had a huge desire to fly and that was about it. The technologies which they pioneered and the answers they provided were picked up and used to meet a number of diverse needs, to solve a range of problems.

It strikes me that very often the major developments of society follow behind the provision of answers by technologies.

If you are already the owner/user of a home computer then you will probably know exactly what I mean. Did you have a need for the computer before you got your hands on it? Did the computer answer that need? Most people would say no to either one or both of these questions.

We have not yet really started to ask the proper questions of the home computer, but very few people have yet described the thing as a failure. In fact it is my opinion that the home computer is a damn good answer still searching out the right questions.

Some of those questions are beginning to make themselves known now. What do we do for home entertainment when we get fed up with the limitations of the television? What do we do when we want special education at our own pace and convenience? How can we get better control of our home, its various gadgets, the heating systems, the communications systems? What happens when we want expert advice but can't get the attention of (or can't afford or can't understand) the expert?

You can guess what I think the answer is. Can you guess what all the other questions are going to be?

If you can, then you are one of a select band. Not enough people at the moment seem to be devoting themselves to thinking up uses for the micros.

And I must confess I don't know why not. It seems that nobody wants to know because they are all too busy playing games.

What will happen when people begin to get bored with games? **John Cochrane**

Haywire digits

Puzzle No. 122

When Jamie dropped his calculator, the display went haywire. Although it still calculates accurately, the digits that are displayed are shown in a rather curious fashion. For example, here is the result of three multiplications:

1 times 7 equals 7

2 times 7 equals 14

3 times 7 equals 21

Unfortunately, the arrangement of the segments of each digit displayed gives no clue as to the original digit. That is, any segment that is displayed does not necessarily indicate that that particular segment is displayed in the digit — and vice versa.

However, there is one consolation in that the faults are constant and any symbol displayed always represents the same digit whenever it occurs. Also the zero is unaffected and shows as normal.

Can you decipher the displays shown?

Solution to Puzzle No 117

This problem can be worked out in much the same way as it would be done longhand, with pencil and paper. In fact, the reciprocal of 97 is a recurring decimal which repeats every 96 digits, so it would be quite easy to find the millionth decimal place, or any other value above 96, without actually counting them. One solution is: 10 D = 10 20 N = 97 30 PRINT "0."; 40 IF N > D THEN GOTO 300 50 Z = INT (D/N) 60 PRINT Z; 70 D = (D - (Z * N)) * 10 80 GOTO 40 300 D = D * 10 310 PRINT "0."; 320 GOTO 40

Thus the 91st digit is easily counted off and found to be a '1'.

Winner of Puzzle no 117

The winner is Colin Tame, Estcoats Drive, East Grinstead, West Sussex, who receives £10.

Rules

The closing date for Puzzle No 122 is September 11.
